

CUSTOM PRODUCTS.

As **easy** as

1 create. **2** print. **3** press!

Create or import your artwork using a graphic program, like CorelDraw® or Adobe® Photoshop®.

Print your image using SublijetIQ® sublimation inks, and standard printer and high quality paper

Using a standard flatbed or mug heat **press**, transfer the image on a wide variety of substrates including...

...mousepads, t-shirts, coffee mugs, plaques and more!

DID YOU KNOW?

When sublimation inks are heated to 400° F, they turn into a gas and form a permanent bond to 100% polyester fabric, or items that have a polymer coating. The image that remains, is a full-color, high-quality, photographic image that will not crack, peel or wash away from the substrate!

Sublimation printing allows you to create short-run, highly customized images on demand. Imagine the possibilities!

Q. What is *Sublimation*?

Sūblimātion (sublima'shun)

noun: (chemistry) a change directly from the solid to the gaseous state without becoming liquid

Sublimation printing has been around for decades, but it wasn't until Sawgrass Technologies discovered a way to formulate sublimation inks so that they would print through an inkjet printer, that it became an economical and practical way to decorate a variety of substrates.
